INFORMACIÓN TÉCNICA // TECHNICAL INFORMATION

I SOPORTES:

Los elementos constructivos que reciben en recubrimiento cerámico deben cumplir unos parámetros tecnológicos que permitan su compatibilidad con los materiales y las técnicas de colocación de las baldosas cerámicas.

Para la correcta colocación, realizaremos un diagnóstico del soporte o superficie teniendo en cuenta:

• La estabilidad de la base o elemento estructural sobre el que se asienta el sistema de recubrimiento.

• La compresibilidad de las capas intermedias que otorgan funciones propias del sistema de recubrimiento cerámico (capas de nivelación, regulación, separación y desolidarización) o bien añaden funciones complementarias al sistema de recubrimiento (capas de impermeabilización, aislamiento térmico o acústico, reparto de cargas, protección, drenaje o calefacción radiante.

• La planitud, cohesión, absorción de agua, textura, compatibilidad química y estado de la superficie de colocación que recibirá el material de agarre.

• Es muy importante **respetar los tiempos adecuados de fraguado y maduración** de los soportes para que puedan soportar correctamente las cargas y evitar posibles tensiones y movimientos estructurales que podrían transmitirse a capas superiores.

• **La superficie a recubrir debe estar plana, seca, y libre de grasa, aceite o polvo** y poseer la estabilidad adecuada.

SOPORTES EN EXTERIORES:

En la colocación en exteriores se necesita un soporte resistente y estable, capaz de evacuar el agua mediante pendientes mayores de un 2%.

2 MÉTODO DE COLOCACIÓN:

Una correcta elección del método de colocación es fundamental para un resultado óptimo de la instalación. **UNDEFASA recomienda siempre la colocación en CAPA FINA*** para todos sus productos.

*** CAPA FINA:** Método de colocación con materiales de agarre utilizando adhesivos cementosos, adhesivos en dispersión o adhesivos de resinas de reacción cuyo espesor máximo no supera los 5mm. Puede ser **simple encolado** cuando el adhesivo se aplica únicamente en una cara o **doble encolado** cuando el adhesivo se aplica tanto en la superficie de colocación como en el dorso de la baldosa.

CONSIDERACIONES GENERALES:

• **Verificar** antes de colocar TONO, CALIBRE y CLASE.

• **Mezclar piezas de varias cajas.**

• **No se admiten reclamaciones referentes al material ya colocado.**

MÉTODO DE COLOCACIÓN EN INTERIORES:

• **Usar una junta de colocación mínima de 1,5mm y en ningún caso se puede colocar sin junta.** Las juntas deben ser rectas y regulares entre sí.

• Para elegir el tipo de **adhesivo** consultar **(Tabla 1).**

• Se recomienda siempre el sistema de doble encolado a excepción de los revestimientos de 20x20 (excepto Zaphire) y 20x25 para los cuales se podrá usar **encolado simple**

• No humectar la baldosa con agua.

• Dentro del tiempo de ajuste se recomienda **levantar alguna baldosa para comprobar si se está consiguiendo la superficie de contacto requerida.**

• Se debe eliminar **el adhesivo sobrante de las juntas** antes de que endurezca para un correcto rejuntado.

• Debemos proteger al acabado cerámico recién instalado, de las inclemencias del tiempo, heladas y secado prematuro. También es necesario proteger el revestimiento cerámico frente a los posibles daños que puedan causar los trabajos posteriores.

• La aplicación se debe realizar cuando la temperatura ambiente, la temperatura del soporte y la de los materiales se encuentran entre **+5°C y +30°C.**

• En el supuesto de colocaciones con junta trabajad o "matajuntas", las piezas no deberán separarse entre sí más de un 20% de la longitud total de las mismas.

I SUPPORT:

The constructive elements which are covered by tiles must have certain technological patterns which make them compatible with the materials and tiling techniques of ceramic tiles.

To achieve a successful tiling, we will diagnose the support or surface by considering:

• The stability of the basis or structural element on which the covering is to be settled.

• The compressibility of the intermediate layers that either grant those functions belonging to ceramic coverings (levelling layers, regulation, separation, and desolidarization) or add complementary functions to the covering system (waterproofing layers, thermal or acoustic isolation, load distribution, protection, drainage, radiant heating).

• Plenitude, cohesion, water absorption, texture, chemical compatibility and conditlions of the tiling surface on which grip materials are to be applied.

• It is very important to **respect the appropriate setting and maturing** time of the support so it can correctly hold the load and prevent thus possible strains and structure movements which could be transmitted to higher layers.

• **The surface to be covered must be plain, dry, free of grease, oil, and dust,** and must also be suitably stable.

OUTDOORS SUPPORT:

Outdoor tiling requires resistant and stable supports able to evacuate water by slopes never minor to 2%.

2 TILING METHODS:

Choosing suitable tiling method is paramount for an optimal result of the installation process. **UNDEFASA always suggests THIN LAYER* tiling for all its products.**

*** THIN LAYER:** tiling method with grip materials by using concrete-like adhesives, dispersion adhesives or reactive resin adhesives which maximum thickness is nor not more than 5mm. It can be **single gluing** when the adhesive is only applied on one face or **double gluing** when it is applied on both the lining surface and the back of the tile.

GENERAL CONSIDERATIONS:

• **Please verify** TONALITY, CALIBER AND TILE before tiling.

• **Mix pieces from several boxes.**

• **Any complaint concerning already tiled products will not be accepted.**

INDOOR TILING METHODS:

• **Please use a tiling joint of at least 1.5mm. Please never tile without joints.** These must be straight and regular.

• In order to choose an **adhesive**, please check **Table 1.**

• **Double gluing** is always strongly advised for all products but 20x20 wall tiles (except Zaphire) and 20x25. **Single gluing** can be used in both cases.

• Please don't moisten tiles with water.

• While adjusting, please **lift one of the tiles to check if the required contact surface is being achieved.**

• To achieve a correct jointing, please **remove the spare adhesive from the joints** before it gets hard.

• **Fresh tiling result must be protected from weather, frost and early drying.** It is also necessary to protect ceramic tiling from possible damages made by later works.

• The application must be performed when room temperature, support temperature, and material temperature are **between +5°C and +30°C.**

• When laying tiles in an offset pattern, the pieces must not be further apart than 20% of their total length.

RECOMENDACIONES DE COLOCACIÓN//TILING SUGGESTIONS

NOTAS: (B.I.) Tipo de baldosa inadecuado (S.I) Superficie a revestir impropia

NOTES: (I.T.) Inappropriate tile (I.C) Inappropriate surface covering.

REJUNTADO:

El rejuntado en interiores se realizará transcurridas al menos 24 horas desde la colocación de las piezas cerámicas. La aplicación del material de rejuntado se realizará según las instrucciones del fabricante.

Generalmente utilizaremos un material de rejuntado tipo CG1 excepto para los productos de la serie UNDEFASA PORCELÁNICO, GRES SERIE MIO CID, SERIE MEDIEVAL o DECORADOS CRISTAL en los que se usará CG2. Para garajes se recomienda el uso de material de rejuntado tipo RG por su fácil limpieza.

En la colocación de materiales del grupo BIII (porosa) en zonas de contacto con abundante agua (duchas, cuartos de baño,...) se recomienda utilizar material de rejunte impermeable para garantizar la completa impermeabilidad del revestimiento. Con esta acción evitaremos la filtración de humedad a través de las juntas entre las baldosas.

MÉTODO DE COLOCACIÓN EN EXTERIORES

• Usar una junta de colocación mínima de 5 mm y en ningún caso se puede colocar sin junta. Las juntas deben ser rectas y regulares entre sí.

• Se utilizarán adhesivos cementosos tipo C2 o R por doble encolado.

• No humectar la baldosa con agua.

• Se precisa aplicar con llana dentada para asegurar la homogeneidad de la capa.

• El adhesivo debe ser protegido de un secado rápido.

• Dentro del tiempo de ajuste se recomienda levantar alguna baldosa para comprobar si se está consiguiendo la superficie de contacto requerida.

• Se debe eliminar el adhesivo sobrante de las juntas antes de que endurezca para un correcto rejuntado

• Debemos proteger el acabado cerámico recién instalado, de las inclemencias del tiempo, heladas y secado prematuro. También es necesario proteger el revestimiento cerámico frente a los posibles daños que puedan causar los trabajos posteriores.

• La aplicación se debe realizar cuando la temperatura ambiente, la temperatura del soporte y la de los materiales se encuentran entre +5 °C y + 30 °C.

JOINT PROCESS:

Indoor joint process must be performed at least 24 hours after the tiling. Joint materials must be applied according to the manufacturer's instructions.

We will generally use joint materials class CG1 except for products belonging to ranges UNDEFASA PORCELAIN TILE, MIO CID FLOOR TILES, MEDIEVAL OR GLASS DECORS, for which CG2 must be used. We suggest joint materials class RG for garages, since they are easily cleaned.

When fixing tiles group BIII (high level absorption) in areas in contact with water (showers, bathrooms, ...) we recommend using waterproof grout material to ensure complete waterproofing on the wall. This action will help to prevent the penetration of moisture through the joints of the tiles.

OUTDOOR TILING METHODS

• Please use a tiling joint of at least 5 mm. Please never tile without joints. These must be straight and regular.

• Concrete adhesives class C2 or R must always be used by double gluing.

• Please don't moisten tiles with water.

• In order to make sure the layer is homogeneous, please always use a serrated trowel.

• Please prevent the adhesive from fast drying.

• While adjusting, please lift one of the tiles to check if the required contact surface is being achieved.

• To achieve a correct jointing, please remove the spare adhesive from the joints before it gets hard.

• Fresh tiling must be protected from weather, frosts and early drying. It is also necessary to protect ceramic tiling from possible damages made by later works.

• The application must be performed when room temperature, support temperature, and material temperature are between +5°C and +30°C.

REJUNTADO:

El rejuntado en exteriores se realizará transcurridas al menos 24 horas desde la colocación de las piezas cerámicas. La aplicación del material de rejuntado se realizará según las instrucciones del fabricante.

Generalmente utilizaremos un material de rejuntado tipo CG2. Para casos en los que se requiera alta resistencia mecánica, estanqueidad y resistencia química utilizaremos material de rejuntado tipo RG. Se extenderá la pasta de rejuntado utilizando una llana de goma adecuada rellenando las juntas en todas su profundidad con movimientos diagonales.

3 JUNTAS DE MOVIMIENTO

La junta de movimiento permite absorber las tensiones del sistema multiestrato del que forma parte el recubrimiento. Son interrupciones del recubrimiento rígido modular que afectan, en algunos casos, a toda la sección del sistema y que están rellenas con un material deformable.

3.1.-Juntas estructurales.

FUNCIÓN. Prolongar en el recubrimiento rígido modular las discontinuidades de los soportes estructurales y cerramientos para absorber y atenuar las tensiones estructurales.

Deben respetarse en toda su longitud y anchura, involucrando a todas las capas que constituyen el sistema de recubrimiento. Los sellantes deberán tener una deformabilidad permanente mínima del 15%.

3.2.-Juntas perimetrales.

FUNCIÓN. Separar el sistema de recubrimiento respecto a los elementos constructivos que se interpongan y allá donde se produzca un cambio de materiales.

Llegarán en profundidad hasta el soporte base o, como mínimo, la capa que actúe como desolidarización. Tendrán una anchura mínima de 6 mm.

3.3.-Juntas intermedias de movimiento.

FUNCIÓN. Dividir en paños la superficie total del recubrimiento con el fin de absorber las tensiones que se producen en su seno, o las inducidas desde el soporte base. Penetran en profundidad igual que las juntas intermedias.

Dependiendo de la situación del recubrimiento y siempre y cuando el soporte sobre el que se actúe sea estable se deberán respetar los valores aproximados de la siguiente tabla:

SITUACIÓN CRITERIA AS PER THE SITUATION OF	TAMAÑO JUNTA STRETCH	TAMAÑO JUNTA STRETCH	TIPO SELLANTE SEALING TYPE
Revestimientos Exteriores Outdoor wall tiles	9-12 m ²	10 mm	FAM >15%
Pavimentos Exteriores Outdoor floor tiles	<25 m ²	10 mm	FAM >15%
Pavimentos Interiores Indoor floor tiles	40 m ²	6 mm	FAM >20%-25%
Pavimentos Interiores con insolación directa o suelo radiante Indoor tiles with direct insolation or radiant floor	<25 m ²	6 mm	FAM >20%-25%

JOINT PROCESS:

Outdoor joint process must be performed at least 24 hours after the tiling. Joint materials must be applied according to the manufacturer's instructions.

We will generally use a joint material class CG2. Where high mechanic resistance, stagnation, or chemical resistance is needed, we will use a joint material class RG. Joint paste must be spread with a rubber trowel by fulfilling the joints with diagonal movements.

3 MOVEMENT JOINTS

Movement joints allow the absorption of the strains in the multi-stratum system to which the covering belongs. They interrupt the modular rigid covering which affects, in some instances, to all the system and which is fulfilled with a distortable material.

3.1.-Structural joints.

FUNCTION. In modular rigid coverings, they extend discontinuities in both structural supports and claddings to absorb and reduce structural strains.

Their length and width must be respected by involving all the layers in the covering system. Sealing must have a permanent deformability of at least 15%.

3.2.-Perimeter joints.

FUNCTION. They separate the covering system from the construction elements where a change of materials is produced. Their depth must reach the basic support or, at least, the desolarization layer. Their width must be at least 6 mm.

3.3.-Intermediate movement joints.

FUNCTION. They divide in stretches the full surface of the covering in order to absorb the strains coming from inside or from the support. They pierce as deeply as intermediate joints.

Depending on the situation of the covering, and always making sure that the support is stable, the approximate values in the following table must be respected:

MANTENIMIENTO Y LIMPIEZA:

4 MANTENIMIENTO EXTRAORDINARIO POST-COLOCACIÓN

• Al terminar de instalar el pavimento aplicar la preceptiva protección a fin de evitar daños causados por trabajos posteriores.

• Se recomienda cubrir con cartón, plásticos que ofrezcan un grado importante de resistencia y permeabilidad, o bien serrín.

• Hay que tener en cuenta las condiciones climáticas ya que podrían influir en el tiempo de secado del material de agarre.

• Los residuos de material de rejuntado pueden dejar aureolas difíciles de eliminar a causa de una limpieza inadecuada o tardía después de la colocación.

• Una vez terminada la obra se procederá a eliminar la suciedad sobrante, con una esponja rígida fina con agua limpia o mediante un desincrustante comercial. También hay otras opciones como un detergente de base ácida, siempre y cuando se tenga en consideración la resistencia química.

• Aconsejamos tener presente varios aspectos en lo que respecta antes de usar cualquier producto de limpieza:

- No hay que llevar a cabo una limpieza ácida sobre pavimentos colocados recientemente, ya que las sustancias ácidas pueden actuar corrosivamente sobre el cemento no fraguado, con lo que se podrían estropear las juntas o acumular compuestos insolubles.

- Para evitar la posible absorción del material de agarre o rejuntado de los elementos utilizados se puede aplicar agua limpia previamente al tratamiento químico.

Es aconsejable aclarar inmediatamente después con agua.

- No se deben utilizar estropajos abrasivos ni espátulas.

- El uso de productos a base de ácido fluorhídrico queda completamente desaconsejado dada su acción extremadamente agresiva.

5 MANTENIMIENTO COTIDIANO

• Las baldosas cerámicas no requieren de un cuidado complejo, ya que su limpieza puede realizarse fácilmente con agua limpia o incluyendo además un detergente de base alcalina.

• Aconsejamos no usar ceras ni jabones aceitosos, ya que la nula porosidad de las superficies vídriosas impide su correcta aplicación.

• Circunstancialmente las baldosas pueden verse afectadas por manchas que no pueden eliminarse al 100%, por lo que será pertinente el uso de agentes de limpieza específicos.

• Consultar previamente la clase de resistencia química de la baldosa.

• Una concentración excesiva de detergente podrían determinar la ineficacia de la limpieza. En tal caso, tendría que enjuagar otra vez ya que de no hacerlo, el pavimento podría presentar aureolas, empeoramiento del brillo, o mayor adherencia de la suciedad.

MAINTENANCE AND CLEANING

4 POST-TILING EXTRAORDINARY MAINTENANCE

• After tiling floor tiles, please apply the compulsory protection to prevent damages caused by later works.

• Covering them with cardboard, resistant and permeable plastic, or sawdust is strongly advised.

• Please consider the weather, since it could affect the drying time of joint materials.

• Spare joint materials might leave ring spots difficult to eliminate due to a non-appropriate or late cleaning after tiling.

• Once the works are finished, please clean the resulting dirt. Use a thin rigid sponge moistened with clean water or an industrial descaling product. While bearing in mind chemical resistance, acid detergents might also be used.

• We suggest to bear in mind a couple of things before using any cleaning products:

- Please don't apply an acid cleaning on recently tiled surfaces, since acid substances can be corrosive on non-forged concrete. Joints could be spoiled and insoluble compounds can be accumulated.

- To avoid the absorption of grip or joint materials, please apply clean water before chemical treatment. Please rinse with water afterwards.

- Please don't use any abrasive scourers or scrapers.

- Please never use any products containing fluorhydric acid. They are extremely aggressive.

5 EVERYDAY CLEANING

• Ceramic tiles are not difficult to attend. They can easily be cleaned with water, either clean or containing alkaline detergents.

• The usage of either waxes or oily soaps is never advised. They can not be correctly applied on glassy surfaces due to their lack of porosity.

• Incidentally, tiles can be affected by spots that can not be completely eradicated. In such cases, specific cleaning products should be applied.

• Please check before cleaning the chemical resistance of the tile.

• An excessive concentration of detergent could result in an ineffective cleaning. In such cases, please rinse them again. Otherwise, floor tiles could have ring spots, their shining could deteriorate or dirt could be more easily adhered.

ÍNDICE DE RESBALADICIDAD//SLIPPERY DEGREE

Con el fin de limitar el riesgo de resbalamiento, los suelos de los edificios o zonas de uso sanitario, docente, administrativo, aparcamiento y pública concurrencia, excluidas de las zonas de uso restringido, tendrán una clase adecuada conforme a la siguiente tabla:

In order to limit the risk of slipping, floors of the buildings or areas for sanitary, teaching, administrative, parking and public use, excluding the restricted areas, will have a suitable class according to the following table:

LOCALIZACIÓN Y CARACTERÍSTICA SUELO	CLASE R	LOCATION AND FLOOR CONDITION	CLASS R
Zonas interiores secas: -Superficies con pendiente menor que 6%. -Superficies con pendiente igual o mayor que 6% y escaleras.	1 2	Dry indoor areas: Surfaces with a slope under 6% Surfaces with a slope equal to or over 6% and stairs	1 2
Zonas interiores húmedas, tales como entradas a edificios desde el espacio exterior, terrazas cubiertas, vestuarios, duchas, baños, aseos, cocinas, etc.. -Superficies con pendiente menor que 6%. -Superficies con pendiente igual o mayor que 6% y escaleras.	2 3	Wet indoor areas, such as building entrances from outdoors, covered terraces, changing rooms, showers, bathrooms, toilets, kitchens, etc ... - Surfaces with slopes under 6% - Surfaces with a slope equal to or over 6% and stairs	2 3
Zonas interiores donde, además de agua, puede haber agentes (grasas, lubricantes, etc) que reduzcan la resistencia al deslizamiento, tales como cocinas industriales, mataderos, parcamientos, zonas de uso industrial.	3	Indoor areas where, besides water, there can be agents (fats, Lubricants, etc) which reduce slippery resistance, such as industrial kitchens, slaughter houses, car parks, industrial areas ...	3
Zonas exteriores. Piscinas (1) Excepto cuando se trata de accesos directos a zonas de uso restringido. (2) En zonas previstas para usuarios descalzos y en el fondo de los vasos, en las zonas en las que la profundidad no exceda de 1,50 m.	3	Outdoor areas. Pools (1) Except in the case of direct access to restricted use areas (2) In areas planned for barefoot users and at the bottom of the in areas where the depth does not exceed 1.50 m.	3

RECOMENDACIONES DE USO PAVIMENTOS//USAGE GUIDELINES - FLOOR TILES

		Espacios para los que se aconseja su uso Usage advised for the surface below				
Grupo Uso Usage Group	Uso Usage	Baños Particulares Home Bathrooms	Dormitorios Bedrooms	Toda la Vivienda Everywhere at home	Oficinas Offices	Comercios y Establecimientos públicos Stores and public establishments
I	Pavimento tránsito peatonal leve. Zona de escaso tránsito con calzado suave. Floor tile for low stepping while wearing nonaggressive footwear.	si / yes	no	no	no	no
II	Tránsito peatonal moderado con calzado suave. Moderate stepping while wearing nonaggressive footwear.	si / yes	si / yes	no	no	no
III	Tránsito regular con calzado normal. Regular stepping while wearing regular footwear.	si / yes	si / yes	si / yes	no	no
IV	Pavimento de tránsito denso con calzado normal. Floor tile for heavy stepping while wearing regular footwear.	si / yes	si / yes	si / yes	si / yes	no
